

# Shutter-movement detector

Código: CT-01

The CT-01 is wired detector for detecting the unauthorised movement of external window shutters on houses or buildings. Can be connected with JA-150M or JA-81M

## Descripción del producto:

In practice the **CT-01 wired outputs** are connected to the **wired input** of a **JA-81M door detector** to connect the CT-01 signals to the **Oasis alarm system**. False alarms caused by the wind moving the shutters are avoided by the door detector **only raising the alarm** when at least **3 pulses are received** from the CT-01 in 5 seconds.

## Información técnica:

<b>Output contact of detector</b>	100 mA / 60V
<b>Range of movement</b>	5 to 260 cm
<b>Dimensions</b>	94 x 102 x 17 mm
<b>Environment according to EN 50131-1</b>	III. outside protected
<b>Operating temperature range</b>	-25 to +50 ° C
