

# Flood detector

Codice: LD-81

The detector indicates room water floods (e.g. cellars, bathrooms). This information is sent to an alarm system for alert message transmission. It is connectible to an JABLOTRON 100+ alarm system via a JA-150M wireless detector.

## Descrizione del prodotto:

If the detector is triggered (e.g. by a water), it sends a trigger signal. If the detector goes into a stand-by condition, it sends a non-triggered signal. The LD-81 takes its power supply from the JA-150M's circuit.

## Informazioni tecniche:

<b>Operating environment</b>	II. internal
<b>Operational temperature range</b>	-10 to +40 °C
<b>Alarm condition</b>	water flood
<b>Maximum length of the cable</b>	2.5 m (can't be extended)
<b>Complies with</b>	EN 50130-4, EN 55022
