# Dual LF-HF UID Metal Key tag

Code: JA-198J

An elegant metal key tag for contactless user authorisation. The dual chip supports both RFID (125kHz) and NFC (13.56MHz) technologies, making it compatible with all previous, current, and future access modules of the JABLOTRON 100, 100+, and Mercury series.

## Product description:

The key tag can be used for quick and convenient authorisation during arming/disarming, automatic door or gate opening, or other functions tied to a simple gesture in front of the keypad. The elegant metal design is perfect for users with an eye for detail.

The back of the tag tag features a wireless reader symbol for easy distinction from the previous type (JA-195J – no symbol).
