

Network video recorder

Code: JI-116V

Local recording from security cameras Cameras and alarm as one system. The new range of video recorders lets you store recordings directly on the customer's premises and links them to the security system. At every alarm event, the customer sees what actually happened – in the app they already know.

Product description:

KEY BENEFITS

The whole system from one portfolio, with a single app

Alarm, cameras and recording in a single installation. **The customer does not need to switch between apps.** Alarm events are linked to the recording. When an alarm is triggered, the user immediately sees what happened.

Secure recording storage

The recording is saved to a hard drive on site. The customer can add a backup to **JABLOTRON Cloud**. **Data is kept safely within the EU.**

Five options to fit installation needs

Choose the right model based on the **number of cameras and the power supply** (with the PoE version, you do not need a separate switch or extra cabling).

Also works with other manufacturers' cameras

Does the customer already have their own camera system and want to add a JABLOTRON alarm? With the NVR, you can easily connect the two.

Connection to an ARC (Alarm Receiving Centre)

An ARC working with **MyARC** sees the camera image during an alarm and **immediately checks what is happening**. From the detector through the camera and recorder to the ARC software – all from JABLOTRON.

Technical information:

Cameras	16
PoE switch	no
Hard drives	1
Dimensions in mm	260×230×43
