

Wireless outdoor motion detector with photo verification

Code: JA-168PC

A reliable outdoor motion detector with added photo verification reveals potential danger – as soon as it detects motion, the snapshot is immediately visible in the app. Both the user and the ARC can therefore tell a genuine emergency from a false alarm.

Product description:

KEY BENEFITS

- **Photo verification:** The moment motion is detected, a snapshot arrives in the MyJABLOTRON 2 app. An end to unnecessary ARC call-outs and customer “panic”.
- **Prevention:** It detects the intruder while they are still approaching. The alarm raised disturbs and deters them before they can damage the building exterior.
- **Wireless installation:** No cables and no external power supply. Simply screw it in place and insert the batteries.
- **Preview even without an alarm:** A current snapshot can be requested from MyJABLOTRON 2 or via a PG output.
- **An alternative to cameras:** Ideal in places where cabling cannot be run, or where there is no reliable internet connection.
- **Battery life of up to 4 years:** Battery life of up to 4 years / Depending on how often photos are taken and how much the flash is used.

A professional mini alarm with Mercury

Combined with the **JABLOTRON Mercury** control panel, it forms a versatile and easily portable mini alarm for construction sites and temporary premises.

Technical information:

Communication with the system	Wireless, two-way, synchronous
System compatibility	JA-103K, JA-107K, JA-108K, JA-102K, JA-152KRY
Certification	EN Grade 2, INCERT
Detection pattern	Fan, range 10 m, coverage angle 94°
Installation height	2.1 to 2.3 m
Tamper detection	Opening, removal from mounting
Power supply	2× 3 V CR123A lithium battery
Battery life	Up to 4 years (at 1 snapshot per day)
Dimensions (h × w × d)	185 × 85 × 100 mm (incl. visor)

IP rating	IP54
Environment class	Class III – Outdoor sheltered
Temperature range	–25 to +50 °C
Available colours	White
